

## Datacard USB Digital Camera Package

### The ultimate in image capture automation

The Datacard™ USB Digital Camera Package offers the best in automated simplicity, while also delivering brilliant, true-to-life quality of the full-color images you capture. Advanced digital imaging capabilities within the camera, combined with exclusive tools within Datacard® identification software packages, bring you the ultimate in image capture control and image quality.

Simply click the mouse once, and a centered, cropped image instantly appears in your software's photo image field. Click again and the captured image is ready to print onto a card. It is that easy.

*The Datacard™ USB Digital Camera Package features "one-click" capture of superb-quality, full-color images.*

### A powerful addition to any integrated Datacard system

The Datacard USB Digital Camera Package offers seamless compatibility with any product in the Datacard® ID Works® and ViaNet® software families. Build a complete, integrated Datacard® identification system by combining the USB Digital Camera Package with a Datacard® software package and card printer that meet your needs and budget.

### New auto-crop feature automates more of the process

Datacard's patent-pending auto-crop feature greatly simplifies the image capture process by eliminating the need to pan, tilt, zoom or view the image on the monitor.

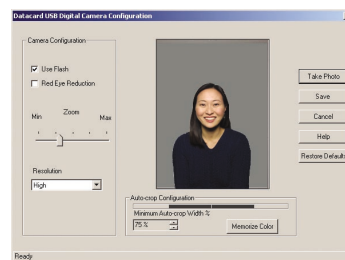

The auto-crop feature automatically crops and centers the image no matter where the subject is positioned in front of the backdrop. Built-in flash and automatic focus exposure also simplifies the image capture process and removes the potential for error.

### Ideal for a range of applications

The Datacard USB Digital Camera Package is suited for identification programs run by government agencies, corporations, schools, loyalty programs, membership programs or any other organization that places equal weight on full-color image quality and system user-friendliness.

### From the world leader in identification

Datacard Group offers the industry's broadest, best-selling portfolio of fully integrated identification systems, software, card printers and accessories. Experienced security professionals insist on the Datacard brand because our solutions offer unparalleled reliability, productivity and ease of use, backed by world-class service and support in more than 200 countries.

*An intuitive configuration window allows you to select backdrop color, zoom ratio, crop box size and cropping aspect ratio.*

## Datacard USB Digital Camera Package

### Standard features
